

April 2020 Tennessee State Climate Summary

Tennessee Climate Office * East Tennessee State University

Prepared by William Tollefson and Dr. Andrew Joyner

With contributions by Climate Data Representatives at University of Memphis, University of Tennessee-Martin, Vanderbilt University, University of Tennessee-Knoxville, and University of Tennessee-Institute of Agriculture

Monthly Temperature Summary:

Mean temperatures across the state were mostly below normal, with a large portion of the state recording an average temperature 2-4°F below normal for April. The month started off warm with temperatures 2-6°F above normal, with several locations reaching the mid- to upper-eighties. A strong frontal passage in the second week of the month ushered in cooler weather, with many of the coldest temperatures of the month recorded on the 15th. This system brought widespread frost and freeze events in its wake, and snowfall was even recorded in Middle Tennessee! Jackson, Clarksville, and Oak Ridge set a daily low temperature record on the 15th as well. The second half of the month remained cooler than normal. In an odd note, for most areas in the southern half of the Cumberland Plateau and in some of the mountains of East Tennessee, the mean temperature for April was lower than the mean temperature for March.

April 2020 Mean Temperature

Departure From Normal Temperatures

Stations with the highest mean temperature

Station Name	Station Type	Mean Temperature (F)
UNION CITY	COOP	67

TAZEWELL	COOP	50.4

Monthly Precipitation Summary:

Precipitation was below normal in the northwest portion of the state, while most of southern West Tennessee and Middle Tennessee, and all areas on the Cumberland Plateau and in East Tennessee recorded above normal precipitation. The month started out dry with many areas recording no precipitation. The strong frontal system that brought in the colder air in the second week of the month also brought heavy precipitation, with most of the state recording over 2 inches that week. For the second half of the month a dry pattern set up over West Tennessee, while East Tennessee continued to record above normal precipitation each week. The Tri-Cities in northeast Tennessee recorded its wettest April for their 73-year period of record.

Drought Monitor:

Despite slightly below normal precipitation in the northwest corner of the state, no areas of drought were observed in April.

Author:

National Drought
Mitigation Center

**U.S. Drought Monitor
Tennessee**

April 28, 2020

(Released Thursday, Apr. 30, 2020)

Valid 8 a.m. EDT

Intensity:

- None
- D0 Abnormally Dry
- D1 Moderate Drought
- D2 Severe Drought
- D3 Extreme Drought
- D4 Exceptional Drought

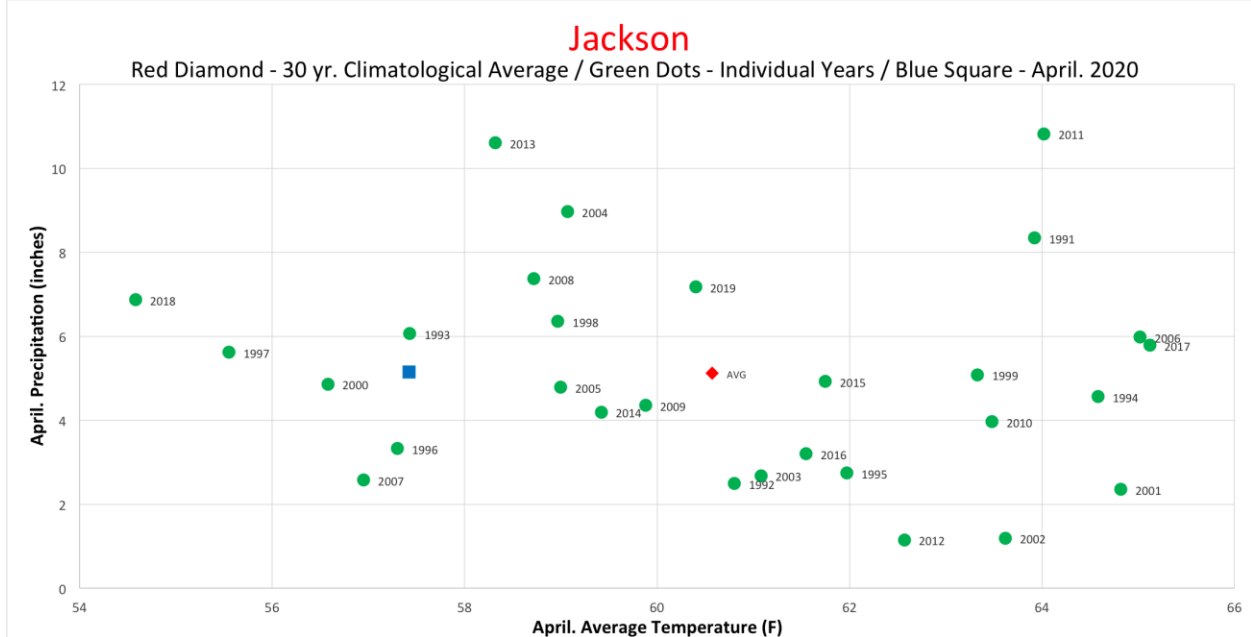

The Drought Monitor focuses on broad-scale conditions. Local conditions may vary. For more information on the Drought Monitor, go to <https://droughtmonitor.unl.edu/About.aspx>

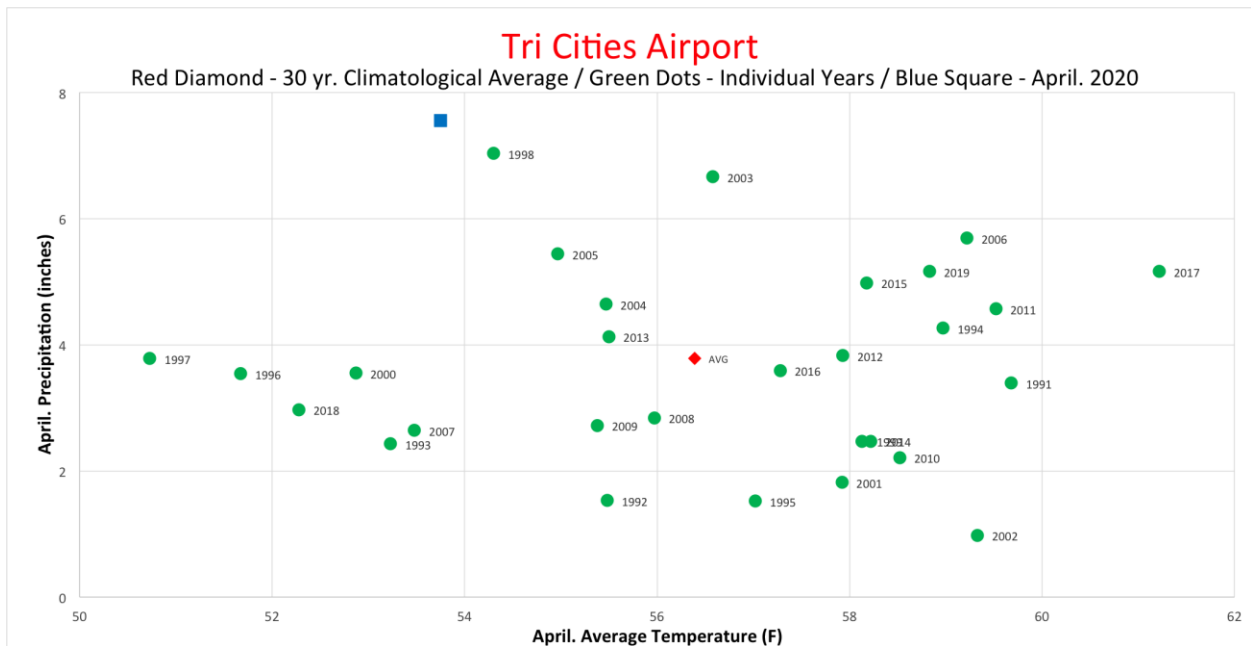

droughtmonitor.unl.edu

The Month in Comparison:

Looking at select airport weather stations across the state reveals that while the month was cooler than normal for all stations, it was not among the top three coldest Aprils for any station. For all but the Tri-Cities, precipitation was also in the middle of the pack. The Tri-Cities airport did record their wettest April for the last 30 years, beating out 1998 by about half an inch of rainfall. Looking at longer-term climate data, the Tri-Cities region recorded its wettest April on record, with records going back 73 years.

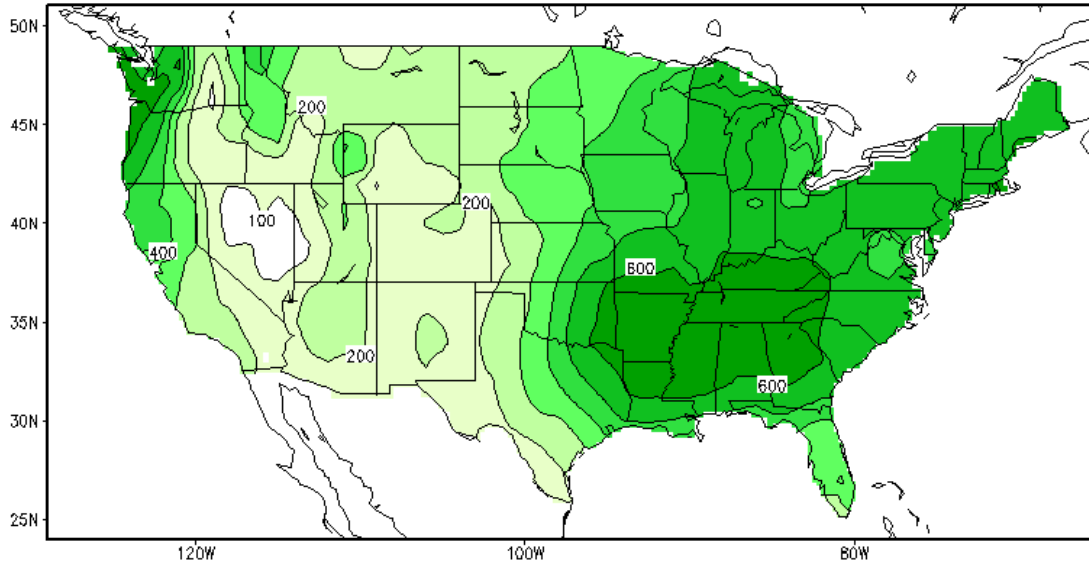

Soil Moisture:

Soil moisture readings averaged above 600mm across the state for the month of April, which was at least 60mm above normal for most of the state. Lower precipitation in the western half of the state reduced soil moisture levels over the month.

Calculated Soil Moisture (mm)
APR, 2020

Calculated Soil Moisture Anomaly (mm)
APR, 2020

Calculated Soil Moisture Anomaly Change
APR 30, 2020 from MAR.31

Streamflow:

Following the general trend of precipitation, streamflow in East Tennessee was much above normal, whereas streamflow in the rest of the state was either normal or above normal.

Miscellaneous:

Crop Conditions from USDA: The warmer than normal start to 2020 led to an early start to growing season. Wet conditions slowed field crop planting in much of the state this month. Several rounds of frosts and freezes in the middle of the month produced some damage to fruit crops (apples, peaches, strawberries, grapes), but the damage was limited. By the end of the month, Apple, Soybean, and Winter Wheat crop progress was ahead of the 5-year average, and all topsoil and subsoil moisture was adequate or surplus.

CROP PROGRESS					CONDITION					
Crop	This Week	Last Week	2019	5 Year Avg.	Item	Very Poor	Poor	Fair	Good	Excellent
	Percent									
Apples – Full Bloom	84	69	82	84	Pasture	0	8	27	51	14
Corn – Planted	35	23	36	42	Strawberries	0	5	33	48	14
Corn – Emerged	13	3	16	15	Winter Wheat	1	2	35	48	14
Cotton - Planted	2	N/A	1	2	Apples	1	8	32	56	3
Soybeans – Planted	8	2	2	3						
Winter Wheat – Jointing	95	87	92	90						
Winter Wheat – Headed	58	26	36	36						

Fire Danger: The Interagency Fire Center projects that the significant wildland fire potential for Tennessee and much of the surrounding region will be below normal for May.

Snow: Measurable snow was recorded at two stations in Tennessee in April, both in the Smoky Mountains (a monthly total of 6.5 inches at Mount LeConte and 0.6 inches at Newfound Gap). However, several weather stations, mainly in Middle Tennessee reported a Trace of snowfall on the 14th/15th of the month. The table below shows the highest daily measured snowfall and the date of occurrence.

Story of the Month:

The major story of the month was a round of severe weather affecting the state late on Easter Sunday, which produced deadly tornadoes. An EF3 tornado hit Hamilton County killing 3, injuring 18 others, and destroying 344 homes. The storm system then spawned three other tornadoes in Bradley County, including an EF2 that hit Cleveland destroying 26 homes. This was the second month in a row with tornado-related fatalities AND an EF3 or stronger tornado.

US National Weather Service Morristown Tennessee

13 April at 11:32 · 🌐

12:30 UPDATE:

Storm survey has found EF-3 damage with winds estimated around 145mph. Storm survey is still ongoing, we'll continue to post updates as they come in.

-----Previous Post Below-----

Preliminary tornado survey in Eastern Chattanooga indicates at least an EF-2 tornado near the Hamilton Place mall. We're continuing to gather more information so this may be updated. Important to stay out of this area if possible due to allow emergency services to work.

Storm Reports:

*Storm Reports are based on filtered NOAA Storm Prediction Center data or local NWS storm reports. Future quality control checks may change the official record of severe events, please see spc.noaa.gov for any updates.

There were 5 days in April with severe weather reports. These included a total of 5 tornadoes, 50 severe wind reports, and 10 reports of hail of one inch or larger. An EF3 tornado hit Hamilton County just before midnight the evening of Easter Sunday; this tornado killed 3 people and injured another 18.

CPC Outlooks for the Next Month:

Looking ahead to May the Climate Prediction Center shows equal chances for temperatures to be normal, above normal, or below normal across Tennessee. Northeast Tennessee is closest to an area that is forecasted to have below normal temperatures (centered over the Greatlakes). Middle and East Tennessee are also shown to have equal chances for precipitation to be normal, above normal, or below normal. West Tennessee has slightly better chances to see above normal precipitation for the month.
