*GEOL 1200 is soon to be added as a required core class for both the Geology Major and Minor programs. This course will review Earth History with a special emphasis on the Geologic Evolution of North America. It will cover the origin of the Earth, the gradual accretion of the North American continent and its motion across the Earth's surface with time. It will also review the major tectonic events that impacted North America such as the formation of the Appalachians and the Rocky Mountains and the major depositional basins that created rock suites such as those seen in the Appalachian Mountains and the Grand Canyon. This course will include labs that introduce students to rock identification, geologic maps and geologic history interpretation. In addition to the course work we will also get out on the rocks!!! There will be three local area field trips to classic rocks sequences that preserve details of the evolution of the North American continent.*
